

News Release

NETGEAR's ReadyNAS NVX 'Recommended' by PC Pro Magazine

Latest storage solution from NETGEAR deemed a good bet for small businesses

The latest addition to NETGEAR's award-winning family of ReadyNAS storage appliances has been recommended by PC Pro, the UK's leading PC monthly magazine. The leading network and storage vendor's ReadyNAS NVX was awarded a five star rating along with the publication's 'Recommended' accolade.

The ReadyNAS NVX is recognised as a 'smart NAS appliance with a very good performance and a range of backup features that will appeal to small businesses', and celebrated as having 'more business-oriented features than the competition'. The full review can be found [here](#).

PC Pro was impressed with the device's NAS and IP SAN support and extensive backup features - including the option of NETGEAR's Vault online backup service, which secures data from the ReadyNAS NVX in its offsite data centre. The PC Pro reviewer commented that the device 'did not disappoint' in performance tests, achieving impressive read and write speeds.

The ReadyNAS NVX enables a combination of file sharing and application storage in a single device, cutting network storage needs in half. The device's dual support for NAS and IP SAN ensures flexible and easy operation of file serving, backup to disk and server virtualisation environments. With the fastest performance on the market, you can simply get more done in less time.

This recognition follows the recent successes of other products in the ReadyNAS range: the ReadyNAS Pro Business Edition, a storage appliance for small businesses, was awarded full marks for performance from TrustedReviews; and the consumer-focused ReadyNAS Duo was deemed 'Best Buy' and Editor's Choice' by Personal Computer World.

For details of where you can purchase the ReadyNAS NVX, or other solutions from NETGEAR's line of award-winning storage products, please see [here](#).
